

ANGEL GUERRA

Solutions Architect & Senior Backend Developer | Agentic AI • Python • Azure | Technical Pre-Sales

Quito, Ecuador · +593 958 922 462 · aaguerra11@gmail.com · linkedin.com/in/angel-guerra-19586552

PROFESSIONAL PROFILE

Solutions Architect and Senior Backend Developer with 10+ years designing, building, and evolving mission-critical platforms for banking, fintech, and leading enterprises. Specialist in distributed systems architecture, microservices, and event-driven architectures, with hands-on implementation and cloud deployment, primarily on Microsoft Azure (Cosmos DB, Azure DevOps) and AWS. In AI, I design and implement end-to-end agentic AI solutions in Python: agents orchestrated with LangGraph, RAG pipelines over knowledge bases and vector databases, tool calling, conversational memory, and prompt engineering, integrated with APIs, enterprise data sources, and MCP services. Experienced in consulting and technical pre-sales: advising strategic clients, needs discovery, designing and presenting solution proposals, and generating new business opportunities.

TECHNICAL SKILLS

- **Software & solutions architecture:** microservices,DDD, hexagonal/clean architecture, CQRS, Event Sourcing, Saga, EDA, BPMN, C4 model, synchronous and asynchronous integration, and architecture governance (ADRs).
- **Agentic AI in Python:** orchestration with LangGraph/LangChain; agents modeled as directed graphs and state machines with conditional transitions, retry loops, checkpointing, conversational memory, and human-in-the-loop.
- **RAG, knowledge bases & prompts:** embeddings, vector databases, semantic search, document chunking, metadata filtering, hybrid retrieval, reranking, and grounded answers; prompt engineering with structured outputs (schemas), versioning, and evaluation.
- **Agent design & integration:** intent routers, tool calling, planning and execution, guardrails, idempotency, and decision traceability; integration with APIs, enterprise sources, MCP services, and cloud components.
- **Cloud — Microsoft Azure & AWS:** Azure Cosmos DB, Azure DevOps, Docker, Kubernetes/OpenShift, CI/CD, GitHub Actions, hybrid architectures, and infrastructure automation.
- **Languages & development:** Python, Java, Spring Boot, C#/.NET, JavaScript/TypeScript; REST, GraphQL, and gRPC APIs; reactive programming and asynchronous processing.
- **Data & messaging:** Kafka, Redis, PostgreSQL, Azure Cosmos DB, Elasticsearch; queues, pub/sub, CDC, Outbox pattern, and eventual consistency.
- **Consulting & technical pre-sales:** strategic client advisory, needs discovery, solution proposal design and presentation, and identification of risks and business opportunities.

PROFESSIONAL EXPERIENCE

PRODUBANCO Ecuador

Senior Solutions Architect 07/2025 – Present

- Lead the solution architecture practice and governance, aligning business goals, technical standards, and execution of strategic initiatives.
- Lead architect for the conception of the bank's new retail mobile banking platform, prioritizing scalability, financial security, performance, and user experience.
- Defined the institutional solution architecture method covering discovery, design, validation, and governance of technical decisions.
- Designed the branching standard and its CI/CD integration to reduce merge conflicts, strengthen traceability, and accelerate delivery time-to-market.
- Established the institutional architecture repository as the single source of truth for designs, reusable patterns, and Architecture Decision Records (ADRs).

BANCO PICHINCHA Ecuador

Expert Solutions Architect – Channels 04/2024 – 07/2025

- Led the architecture and implementation of the BP One MVP, unifying customer service and integrating Genesys Cloud and Agencia 5Cola for an omnichannel experience.
- Designed the web banking contact-list architecture, transversally integrating the alias directory and favorite accounts.
- Contributed to the DetectID-to-Auth0 authentication provider migration strategy for BP One, Mobile Banking, and Web Banking.
- Contributed to the bank's target architecture and to the guidelines of a common layer focused on reuse, decoupling, and resilience.
- Defined the architecture for cross-cutting customer APIs and the PQRS (requests and complaints) capability to standardize data access and request management.

NTT DATA

Ecuador / Peru

Lead Architect 02/2023 – 03/2024

- Advised strategic clients on enterprise and solution architecture (technical pre-sales), identifying risks, alternatives, and technology evolution opportunities, increasing client satisfaction and generating new business opportunities.
- Led for RIMAC (Peru) the design of a cloud data-processing architecture to automate Salesforce marketing campaigns.
- Defined the architectural foundations of BP One as Banco Pichincha's unified customer-service platform.
- Coordinated multidisciplinary teams across digital transformation initiatives, ensuring scalable solutions aligned with business goals.

DACODE — Tenpo Project

Chile

Senior Backend Developer 11/2022 – 01/2023

- Built services for Tenpo's new distributed core banking platform on Kafka and Redis, using gRPC for internal communication between microservices.
- Modeled customer onboarding, cash-in/cash-out, balance, and transaction flows with BPMN, and documented the solution with the C4 model.
- Added observability with New Relic, Elasticsearch, and Kibana for metrics, alerting, and log analysis.

ESTRATEGIT

Ecuador

Technical Lead / Software Architect 11/2019 – 10/2022

- Served as cloud infrastructure advisor and software architect for banking, insurance, retail, and food-industry clients (Chubb Insurance, KFC Group, Pycca, McDonald's Ecuador, among others).
- Hands-on technical lead in Java: systems integration, API design, microservices, and legacy platform modernization.
- Evolved the e-invoicing core for Ecuador and Colombia and designed SOAP integrations for clients with legacy systems.
- Designed and implemented hybrid Microsoft Azure + DigitalOcean architectures for large-scale data processing, with CI/CD automation on GitHub Actions.

TRIBUTASOFT S.A.

Ecuador

Head of Systems / Developer 09/2014 – 11/2019

- Led the development team and participated in designing and implementing CRM, accounting ERP, inventory, AR/AP, invoicing, and Android applications.
- Built an event-driven messaging system to decouple processes across the modules of the accounting platform.
- Developed online/offline e-invoicing with Ecuador's tax authority (SRI), tax reporting (ATS and tax forms), and SAP ERP integration reports.

EDUCATION & TRAINING

- AWS Solutions Architect — Smart Data.
- Advanced Java SE, React JS, Docker Swarm, and JavaScript Fundamentals — Platzi.
- Practical Sales and Public Speaking (F.E.U.E.) — commercial and communication skills.
